

NATIONAL ENGINEERING ROBOTICS CONTEST 2025

THEME: LEGO SCHOOL

National Engineering Robotics Contest

A joint venture of NUST and STEM Careers Programme (HEC) Organized

by:

Department of Mechatronics Engineering,

College of Electrical and Mechanical Engineering (CEME),

National University of Sciences and Technology (NUST), Islamabad, Pakistan &

National Centre of Robotics and Automation (NCRA)

CHANGE LOG

The table below will list the pages on which changes have been made to the theme.

Revision Date	
19-2-25	Dimensions of Lego 3d Fruit updated.
14-3-25	Rules regarding Fruit Box picking revised. 4.10
21-5-25	Rules regarding Laptop usage is elaborated on page#7

Contact: nerc@ceme.nust.edu.pk

Website: <http://dmtsnust.com/NERC/>

Telephone: +92-51-5444-4450

NOTE:

1. Any correspondence with the NERC officials via e-mail, telephone, or any other means will not be considered as part of the rules (unless uploaded as an FAQ on official NERC website).
2. In all matters of interpreting the rules before and during the Contest and in any issues not covered by these rules, the decisions of the Contest Judging Committee will be considered final.

1 INTRODUCTION

The National Engineering Robotics Contest (NERC) is a joint project of the National University of Sciences and Technology (NUST) and Science Technology STEM Careers Program HEC to promote research in the field of robotics and its related fields in Pakistan. We, from the Department of Mechatronics Engineering, welcome you all to participate in 21st National Engineering Robotics Contest (NERC 2025). This competition will provide a common platform for the integration and evaluation of various electromechanical designs, control and path planning algorithms, and agent architectures.

Over the years, NERC has grown increasingly popular among students as well as engineering departments across the country. The Engineering students and students of various schools and colleges from all over Pakistan participate in this competition. Many students participate in this contest in their final years of undergraduate degree and take the contest theme as their Final Year Project, thus becoming part of human resource required in field of robotics and automation. This not only adds value to the competition but also resolves our pledge to bring exciting new challenges every year for the advancement of robotics community at an increasingly wider scale. Robotics is a buzz word at today's technology forefronts. Due to exponential advancements in fields like high performance computing, computer vision, computer networks, material sciences and power electronics, the growth experienced by robotics in past few years is unprecedented. Robotics is the only field which can add precision while replacing the slow manual labor in the contemporary industrial world. Thus, this field faces enormous pressure from industry to produce all-purpose mobile manipulator robots which can perform complex tasks like grab, navigate and place objects at desired locations autonomously. The future of Pakistan relies heavily on advancement in the fields of engineering and science, events of this nature will encourage and motivate students to improve their technical skills in leaps and bounds. The focus of NERC 2025 modular school category theme is to create a Lego robot that can automate picking of the fruit box. In this theme, the robot's task is to pick the fruit box from the specified location in the farm. The first team to successfully complete the task and reach the finish line will be declared **"The Winner"**.

2 CATEGORIES

There are two categories of the contest:

- Indigenous Robot category
- Modular Robot category.

The purpose of this contest is to develop a sense of problem-solving, project- based learning, team-based learning, technical design and ingenuity among the contestants.

2.1 INDIGENOUS ROBOT CATEGORY

Indigenous category includes robots that are constructed from scratch. Their mechanical structure, controls etc. are designed by the teams themselves. The electronic control modules including all electronic boards and motor drivers (Unless specified otherwise) etc. should be designed and manufactured by the students.

This category is only for university students.

2.2 MODULAR ROBOT CATEGORY

The Modular category has 2 divisions:

- I. Lego: Contestants can use Lego or similar kits that use a programmable brick/smart brick and sensors that come along with the brick.
- II. Ready to Race: Contestants can use Arduino/Logic based ready-made kits or create custom kits using Arduino or a similar controller or logic based ICs.

The Modular category is further divided into two subcategories:

2.2.1 Modular School

2.2.1.1 *Lego School*

2.2.1.2 *Ready to Race School*

2.2.2 Modular University

2.2.2.1 *Lego University*

2.2.2.2 *Ready to Race University*

*This document describes the theme for **Lego School Category**. This category is for A-level / Intermediate students or below.*

3 CONTEST STRUCTURE

The contest will consist of two stages:

1. Heats/Qualifying Rounds
2. Head to head matches

3.1 QUALIFYING ROUNDS

Each robot will participate in the qualifying rounds (heats). There will be no head-to-head matches

in heats. For qualifying rounds following rules will be observed:

- 3.1.1 There will be NO head-to-head matches. Each team will individually run their robots.
- 3.1.2 Seeding chart will be based on points scored by teams. If the points of both teams are equal, decision will be made based on time taken by both teams. The team with least time will be placed on higher seed position. If time of both teams is also same, the decision of the higher seed will be based on the shortest distance from the next objective from the current position (as per discretion of judges). If all the above criteria are the same, coin toss by judges will decide higher seed position.
- 3.1.3 Each team will be provided with maximum of 3 minutes to run their Robot. A timer will be displayed for the audience, however, accurate time through the stopwatch will be recorded by jury.
- 3.1.4 A team can take as many retries as desired within 3 minutes without any penalty but only the total time taken, and final score will be recorded. (Refer to the section 7.9, **Retry** For further details)
- 3.1.5 When the team takes a retry the score is reset to zero and the entire arena will be reset.
- 3.1.6 When the team is ready, and the whistle is blown, time will be started.
- 3.1.7 If a robot is not able to successfully complete the task in time, then the time when team's flag bearer will call it off (By saying "STOP") will be recorded as the finish time.
- 3.1.8 Only the **flag bearer** has the right to say **Retry/Stop**. Other members of the group must refrain from saying Retry/Stop other than the flag bearer to avoid confusing the referee, If referee makes a call due to the confusion caused by other team members, the referee's call will be considered final.
- 3.1.9 Judges reserves the right to give a re-run to any team with zero score with justifiable reason (if required). This clause will only be applicable if the Judges, Jury and Referee agree to the re-run. This clause does not apply to the team's request but to reasons which are justifiable and acceptable to the judging committee.
- 3.1.10 If the robots complete all tasks successfully and crosses the finish line (scoring maximum point), the stop called by the flag bearer will be of no importance/significance.

3.2 HEAD-TO-HEAD MATCHES

After qualifying rounds, the top 32 teams (with non-zero score) from the qualifying rounds will go on into the final rounds for head-to-head matches. The judges reserve the right to change the number of head-to-head matches. The winners will be decided through a final match. The Runner-up will be decided based on the outcomes of the semifinals. (Subject to award of runner-up category only).

4 CONTEST THEME

NERC 2025 theme is the continuation of last year's theme where the fruits have grown on the trees. In this theme, the task is to build a modular robot that will pick fruit box on a farm and carry till entering the parking area. The first team to successfully pick the fruit box and reach the parking area will be declared the winner. The Contest Arena, depicting a complete farm where the fruit box pick is to be conducted, is shown in Figure 1. Details are as follow:

1. Laminated wooden sheets (lasani) are used for the construction of the arena. The floor of arena will be of white color as shown in the map (Fig. 1). All the boundary walls and separation walls have a height of 5 inches throughout the arena. The solid line made with black tape of 3cm width (Dotted Line in Fig 1) present on the floor of arena can be used for line tracking. The entire arena is divided into 12x12 inch grids.
2. The starting position and orientation of the robots are fixed. The robot must be placed behind the starting line shown in Fig. 1 with red color. The complete robot should be behind the line. The red colored line is only for reference in Fig. 1, it will be a solid black colored line on actual arena.
3. The Robot may follow the black line (Reflective Tape) or Wall of the arena to locate the fruit box.
4. The fruit box is placed at F1 location of the arena (shown by red box at (6,3) location in figure 1) and the placement of fruit box is fixed. The details of the fruit box are provided as Annexure A.
5. The robot will reach the location of the fruit box and pick it up.
6. After successful collection of fruit box, the robot will move towards the Parking spot as marked in the arena shown in Figure 1. However, after picking the fruit box, the robot must cross the highlighted region/red line on row 4 (labelled as A for reference only). Failure to cross checkpoint A shall result in a forced retry. The red line labelled as A in row 4 is only present in Fig 1 for reference, it will not be present on actual arena.
7. The robot must avoid yellow-colored boxes (figure 1) that represent obstacles present in the arena. The dimension of obstacles is 5x5x5 *inches*. The robot cannot go through the obstacles.
8. Red-outlined boxes are made of red tape.
9. The team to successfully complete all the tasks and reach the parking spot will be declared the winner. A successful "reach" means all the parts of the robots have crossed the parking entrance line (represented with red color in Fig.1) and no part is on and above the line. The red colored line is only for reference in Fig. 1, it will be a solid black colored line on actual arena.

10. Dragging of fruit boxes is not allowed. The robot must pick the fruit box and enter the parking for the task to be completed. However, while picking, if the fruit box is slightly dragged that may be allowed as per the discretion of the judges. Constant dragging of the object till the end point is not allowed.
11. The two sides are mirror images of each other.
12. After the start of the match, the team cannot touch the robot.
13. Each team must bring their own robot.
14. In case of a retry, the teams can reset their robots.
15. The maximum dimension of the robot is 12x12 inches (LxW).
16. The programming of the robot is allowed only in the setup time of around 1 minute, it is not allowed once a match has started.
17. **The laptop needs to be closed during the run and all groups are advised to initiate the Robot run from robot itself. However, in the extreme circumstances where the robot is required to be started from the laptop. The laptop must be placed in front of the judges/Jury and group will be allowed to click only one button. The changing of the code from laptop will not be allowed during the run.**

Arena Layout-2D

Figure 1: Contest Arena top view

- *Each grid is 12x12 inches.*
- *Both sides are mirrored images, the trees are represented with green boxes.*
- *Yellow-colored boxes display the position of obstacles present in arena only. These are centered, 4x4x5 inches.*
- *Solid Black lines show the height of 5 inches wall and dotted lines shows the black tape of 3cm width on arena.*
- *The red-outlined boxes are made of red tape having 1 inch width. The dimension of the complete red square region will be 7x7 inches (including the dimension of tape).*
- *Robot must cross the region/red line labelled as A (label and red line are made in Fig 1 for reference only).*

5 ROBOT OPERATION

The qualifying teams (those which qualify for the final rounds) will compete with each other in a knockout format. In each match two teams will be pitted against each other, running their robots' side by side in the contest arena. Teams will be declared as Team A or Team B based on the coin toss before every match. The winner of coin toss will decide which arena to choose i.e. Left Arena or Right Arena. The left arena will be given a Blue flag while the right arena will be given a Red flag, hence the arena may be referred to as the Red or Blue arena. Once turned on, the robot must be self-controlled without any human intervention. Contestants are NOT allowed to touch their robots. After the blow of a whistle, the robot will have 3 minutes to complete the task.

During a retry, the layout of the arena shall remain SAME and shall be reset , however the point-scoring will restart from zero. The robot may navigate through the arena using any suitable technique. The robot must not displace any item/obstacle in the arena. Displacing any item inside the arena will result in a forced retry or disqualification as per discretion of judges (Judges decision on declaring a displacement will be final). If the participating team sees that their robot has lost track of its location and is facing trouble localizing itself, the team can ask for a retry by raising their flag. During its motion, the robot may touch the walls of the arena without damaging them, but it is not allowed to use any sort of tactile sensor to sense the walls. This will result in forced retry or disqualification (as per discretion of judges).

In case of a tie, the contestant may be required to run a rematch, or the winner may be decided on a coin toss as per the discretion of the judges.

For a particular match, both teams will face the same layout of the arena.

6 POINTS

The point scoring is shown below in Table 1 Point Scoring.

Table 1 Point Scoring

Point Scoring	Score
*Reaching F1 position	25
Successful picking up the fruit box and carrying it throughout the path	25
Crossing the point A (full robot must have crossed the line of checkpoint A)	25
**Entering the Parking	25
Total	100

*Reaching means the front tyres of the robot must be within one grid position of the fruit box.

****Entering means all the parts of the robots have crossed the parking entrance line and no part is on and above the line.**

6.1 DEDUCTION OF POINTS

The deduction of points is shown below in Table 2. Deduction of Points

Table 2. Deduction of Points

Deduction/Penalty	
The robot fits in an area of 12x 12-inch square	No Penalty
Oversize Robot (14x14 inch square)	5 Points
Oversize Robot (exceeding 14 x 14-inch square)	Disqualification
Robots weighs less than 12 kg*	No Penalty
Overweight Robots (Weight between 12 and 14 kg)	5 Points
Overweight Robots (Weight exceeding 14 kg)	Disqualification
Damaging the arena/wall/sites/Tape/Objects	Disqualification

*This is the individual weight of each robot

The penalty handicap shall be applicable in heats and head to head matches.

7 RULES

The following are the rules governing the contest.

7.1 GENERAL

- 7.1.1 The Contest judges may stop any robot at any time if they feel that it is performing, or is about to perform, any action that is dangerous or hazardous to people or equipment.
- 7.1.2 Additional information regarding the contest rules and regulations may be found in the Tab of FAQs (<http://dmtsnust.com/NERC/>) and will be considered as part of the theme and rules. New FAQs are uploaded frequently so keep watching the FAQ corner for new information.
- 7.1.3 Any correspondence with the NERC officials via e-mail, telephone or any other means will not be considered as part of the rules (unless uploaded as an FAQ on official NERC (website). It is the responsibility of the contest to be familiar with all the rules.
- 7.1.4 If both the teams have scored same points but are not able to complete the task in allocated time slot decision of the winner will be on judges' discretion who will determine which robot is closer to finish the task first.
- 7.1.5 If both teams have scored the same points, have the same time and are at the same distance from the finish point, a coin toss will be used to decide the winner.
- 7.1.6 If any team wants to launch a protest (of any kind), they must do so within 15 minutes after the end of their match. The procedure and payment is outlined in Annex B.
- 7.1.7 Attempting to damage the game field or performing an act that fails to comply with the spirit of Fair Play will lead to the disqualification of the team.
- 7.1.8 In all matters of interpreting the rules before and during the Contest and in any issues not covered by these rules, the decisions of the Contest Judging Committee will be final.
- 7.1.9 Wireless Control of the Robot for operation is not allowed.

7.2 TEAMS

7.2.1 Each team can comprise of a ***maximum of 6 members***.

7.2.2 If the students from two different Institutions join hands and form a team in collaboration, then the name of the Institution with maximum number of students in such a team would be registered or official consent from both institutions will be required at the time of registration before the contest start date.

7.2.3 A person can't participate in more than two teams

7.3 ROBOT SIZE AND WEIGHT

The robot fits within 12x 12-inch square at the time of measurement. If the area of the robot base is more than 12x 12-inch square but less than 14 X 14- Inch square, then points will be deducted. There is no restriction on the maximum permissible height of the robot. Any robot which does not fit in 14 X 14-Inch square will be disqualified. All robots will be carefully measured. All sensors mounted on the robot will be counted as part of the robot's total dimensions. If contestants want to add a flag, hat or other purely decorative, non-functional items to the robot, they may do so. The decorations may be removed for measurement purposes. The weight of each robot excluding decorations must not exceed 12 kg. Penalties as detailed in 6.1 Deduction of Points will be levied if the robot does not fulfill the size and/or weight criteria.

7.4 ROBOT OPERATION

7.4.1 Any team that damages the arena will be disqualified.

7.4.2 The robot must not use any harmful substances such as oil, petrol etc. in its operation that can damage the arena.

7.4.3 The Robot CANNOT split after the start of the game, only one Robot is allowed to compete at a time.

7.4.4 The robot must not use any destructive or dangerous methods to displace any obstacle or box.

7.5 SENSORS

7.5.1 Robot is not allowed to use tactile sensor of any type for sensing the Walls.

7.6 POWER SUPPLY

- 7.6.1 The robot must be battery-powered.
- 7.6.2 The robot must not have any wired connections with its surroundings.
- 7.6.3 Voltage of the machine's electrical power source must not exceed 48-volt DC. **Power banks may be used.**
- 7.6.4 Power sources that are considered dangerous or unsuitable by the contest Officials shall not be permitted.

7.7 DURATION OF MATCH

- 7.7.1 Each match will be of maximum 3 minutes.
- 7.7.2 Teams will be given around 1 minute for setting up the Robot at the start.
- 7.7.3 Robot can start at the instant when the start signal is given and a whistle is blown. The Robot should be constructed so that it can be started in minimum possible steps.
- 7.7.4 Once the robot moves, team members will not be allowed to touch the robot or enter the Contest Arena. If any team member enters, forced retry shall be imposed.
- 7.7.5 Timing shall start 5once the start signal is given and the whistle is blown.
- 7.7.6 Time would be stopped as soon as robot reaches completely into the parking spot. If a robot is not able to successfully complete the task then the time when team will call it off (by the flag bearer saying "STOP") will be recorded as the finish time. The team must leave their robots as it is on their current locations when time stop is called by them. They must NOT pick their robots up till the referee announces the end of the match. The team is not allowed to take a retry after the time has stopped or STOP has been called.
- 7.7.7 The team which picks fruit box and then reaches the parking spot first will be declared the winner of the match.
- 7.7.8 If both teams fail to complete the task, within the time limit, the team scoring more points will be declared the winner of the match.
- 7.7.9 If both the teams have scored the same points but are not able to complete the task in allocated time slot then winner will be decided on time if both team calls stop at same time, then decision of the winner will be on judges' discretion who will determine which robot is closer to finish the task first. The distance of the robot's current location from the Finish Point (Parking Spot) will be measured.
- 7.7.10 The Complete robot is required to cross the parking line for the run to terminate.

7.8 RETRY

If the robot is strayed due to some reason, retries are allowed.

- 7.8.1 There is no limitation on the number of retries and a team can take as many retries within the 3 minutes duration of the match. No Points will be deducted for retries but total score will reset to zero.
- 7.8.2 Each team would be provided a flag of their respective team. If a team wants to take a retry, the flag bearer must raise the flag and say clearly “retry”. Once the referee announces a retry, the team shall place its robots at their starting location
- 7.8.3 If a team wants to stop their robot during the match, the flag bearer must raise the flag and say “stop”. The team can then turn off their robot, but they must not move it. The time at which the robot is stopped would be recorded as the final time. The team must not enter the arena until referee has acknowledged the “STOP”.
- 7.8.4 For each retry, robots must be started again from the start point. Points will reset to zero.
- 7.8.5 Arena Management team is responsible to reset the arena, any team member is not allowed to interfere or do the resetting of arena themselves. If such an act is done, referee will call retry.
- 7.8.6 Separate time for individual retries will NOT be recorded or maintained. When a team takes a retry, it is only allowed to restart the robot.
- 7.8.7 Once the start whistle is blown the team can’t reprogram their robot
- 7.8.8 If the contestants enter the arena during the match, it will automatically be counted as a retry.
- 7.8.9 Once the stop has been called by the team or flag bearer or the task has been completed (obtained full marks), retry will not be allowed.
- 7.8.10 Only the **flag bearer** has the right to say **Retry/Stop**. Other members of the group must refrain from saying Retry/Stop other than the flag bearer to avoid confusing the referee, If referee makes a call due to the confusion caused by other team members, the referee’s call will be considered final.

7.9 DISQUALIFICATION

The following behavior shall be considered for disqualification by the referee and the team could possibly be disqualified:

- 7.9.1 Attempting to damage the game field.
- 7.9.2 Performing any act that fails to comply with the spirit of Fair Play

7.10 MODIFICATIONS

Programming and control of the robot must be done through LEGO/NXT/EV3/SPIKE PRIME etc official controller i.e. brick. Parts of the robots can be modified/customized/3D Printed for better performance.

7.11 PROTEST PROCEDURE

The protest procedure is as follows:

- 7.11.1 The team must launch a protest (submit a complete protest form to the head jury) within 15 minutes after the end of their match.
- 7.11.2 The team must collect the protest form from the head jury on request or use a hard copy of the form in Annex B.
- 7.11.3 The team must submit a non-refundable protest fee of Rs. 5000/- along with the protest form.
- 7.11.4 A complete protest form includes submission of the protest fee.
- 7.11.5 The head jury will forward the case to the judges.
- 7.11.6 The judges will decide on the protest's validity and render their decision.
- 7.11.7 In case of noncompliance of any of points above the protest will not be considered valid.
- 7.11.8 The judges' decision will be final.

8 TEST RUN

Contestants will be given time for trial run one day before the contest to calibrate their robot/sensors on the actual arena/game field. However, considering the huge numbers of participants, practice time may be limited. Scheduling shall be done by the organizers.

Annex A Fruit box details

The shape of the fruit box is given as follows.

Made from PLA

Net weight = 18grams

a) Fruit Box

b) 3d Model

c) Obstacles 5x5"

Annex B Protest form

Protest Form

Team Name:	
Team ID:	
Team University:	
Team Members:	
Match finish time (to be filled by Head Jury)	
Launch time of Protest (to be filled by the head jury)	
Protest fee Payment (to be filled by head jury)	

Reason of Protest: _____

***By Signing below, I confirm that the decision made by the judges is final and I will not protest it any further.**

Signature of Team Leader

Signature of Head Jury

Decision of Judges: _____

Signature of Head Judge
